

HOW TO CLEAN WINDOW TINT

Keeping your window tint clean is easy as long as you know how.

There are several window cleaners made specifically for tinted windows. You can also use soap and water, vinegar and water, or anything that does NOT contain ammonia or abrasives.

Do not use the blue "Windex with Ammonia-D" or any blue colored cleaners because they usually have ammonia in them.

It's good to use Green Vinegar Windex or any of the citrus Windex's.

There are other cleaners made specifically for tinted windows such as "Ammonia-Free Spray Away-Foam Spray". These products work well.

When cleaning the window tint be careful around the edges of the tint not to cause it to peel up.
